

Expert training in non-oral therapy pathway for Parkinson's

For all clinicians with an interest in Parkinson's disease

Following the publication of a pathway for non-oral therapies in Parkinson's, we plan to offer training in delivery of the pathway through regional workshops.

This daylong MasterClass will cover therapies such as Duodopa, apomorphine, and deep brain stimulation,

We ran a similar series last year, and these workshops will be a further update now that the pathway has been published. It will also cover other advanced areas from the MasterClass programme.

We hope to offer six such workshops throughout the UK, including in Scotland. Locations and dates to be confirmed shortly.

If you are interested in attending please get in touch.
